Enhancing Your Healthcare Technology Investments

Healthcare Technology Solutions

EHR Optimization
- Migration
- Barcode Specimen Collection
- Smart Pump EHR Integration
- Business/Clinical Workflow Improvement
- Sepsis Surveillance
- Meaningful Use/CQM Management

Interoperability
- Medical Device Integration
- Clinical Workflow Integration
- HIE Integration with EHRs
- Custom Interfaces
- Interface Monitoring
- Physician Office Integration

Privacy & Security
- Privacy Monitoring and Breach Detection
- Privacy Analytics
- Vendor Risk Management
- Secure Vendor Connectivity
- Incident Tracking & Remediation
- Privacy Monitoring Managed Services

Innovative Software Solutions
Extensive Partner Network
Diverse Healthcare Experience

IATRIC Systems

Enhancing Your Healthcare Technology Investments
Our Mission
Iatric Systems enables success by delivering healthcare technology solutions that enhance existing investments.

What We Do
We bring together healthcare experience, products, services, and partners to deliver solutions that enhance existing investments in healthcare IT.

Who We Are
We are a team of more than 250 Information Technology and Healthcare specialists dedicated to improving the delivery of care through technology. Our ranks include IT managers, project managers, software engineers, nurses, pharmacists, lab techs, and other medical professionals. Their depth of real-world IT and hospital experience produces advanced, practical solutions that more than 1,300 hospitals use today with confidence.

Iatric Systems by the Numbers
Our long history of helping organizations enhance their existing healthcare IT investments includes:
• Supporting more than 1,300 hospitals
• Deploying more than 21,000 interfaces and 1,600 applications
• Integrating more than 800 vendor systems

Awards
• Best in KLAS® - KLAS Category Leader
• Best in KLAS - Ranked #1 in the KLAS “Specimen Collection Barcoding” segment
  as published in the Top 20 Best in KLAS Awards report every year the segment existed: 2007 - 2012
• Black Book Research
  Top ranking in 2017 for Interoperability Solutions, EHR Optimization, and Client Satisfaction
New Solutions, and Customer Favorites

From CIOs to clinical, financial, and administrative end users, there’s something of interest for everyone. Here’s a brief overview of our new, and tried and true solutions.

6.1 Reports Migration – All hospitals — even those already running 6.0 — have much to do when migrating reports to the 6.1 platform. Iatric Systems has the expertise to simplify your 6.1 reports migration. We can lift as much — or as little — of the burden as you choose by offering flexible, affordable options.

Accelero Connect® Smart Pump EHR Integration – Connect your smart pumps to MEDITECH MAGIC, Client/Server, or 6.x. Smart Pump EHR Integration can help increase revenue, improve patient safety, reduce errors, and save nurses time.

FlexButton™ – Improve access to critical patient information by directly connecting to the same patient’s record in any other system. Alert clinicians about patient data when and where they need it.

Interface Monitoring and Response – Receive 24/7 professional monitoring for all of your healthcare IT interfaces. We alert on service disruptions, determine the root cause, and provide trend reporting.

MobiLab® Desktop for Nurses – Help nurses eliminate mislabeled specimens with the same scanners they use for medication administration. MobiLab Desktop also provides nurses with online instructions to help minimize phone calls to and from the lab.

Partner Risk Manager™ – Safeguard your patients’ trust with automated workflows to classify vendor and business associates risk, and evaluate vendor requirements based on risk-tier.

Secure OnRamp™ – Simplifies third-party remote connectivity to your network, and puts advanced security checks in place to ensure secure access to your network and PHI, while reducing the burden on your IT staff.

Security Audit Manager iQ™ – Built on 15 years of insights, Security Audit Manager iQ learns from past audits to find hidden inappropriate behavior and dramatically reduce false positives — so your auditors can do better work in less time.

Sepsis Management™ – Detects signs of sepsis early, by continually monitoring clinical data that identifies all at-risk patients, and alerting clinicians right in the patient record.
