

Patient Privacy Manager's Portal

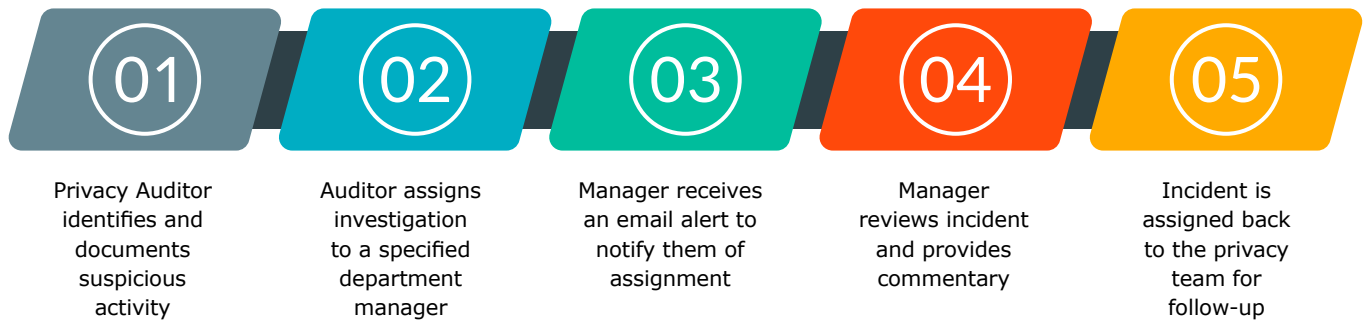

Streamline Workflows Between Your Privacy Team and Your Department Managers

iatricSystems patient privacy solution analyze every access to PHI and presents your staff with suspicious activity. But once a suspicious activity is spotted, the privacy team must work with department managers to complete the documentation surrounding an investigation. The Manager's Portal, a part of our patient privacy solutions, simplifies this process by streamlining workflows between the privacy team and department managers when conducting a privacy investigation.

Streamline Communication & Investigation Report

How the Manager's Portal Works:

Benefits of Patient Privacy Manager's Portal

Manager's Portal streamlines communication and gives managers an at-a-glance view over patient privacy initiatives with the following benefits:

- **Minimize Risk to Investigation Integrity** - Manually exporting evidence and attaching it to email can constitute risks to investigation integrity and patient privacy. The Manager's Portal keeps all relevant documentation and investigation workflows within the Patient Privacy system, minimizing effort and optimizing incident accountability.
- **Increase Privacy Awareness at Department Level** - When department managers are more involved with incident investigations, they become a key stakeholder in understanding the behaviors of their staff. This can result in increased privacy awareness at the department level, where managers can improve the privacy culture in their respective areas.
- **Alleviate Excess Work for Privacy Team** - The Manager's Portal distributes the investigation and documentation tasks across an organization instead of relying specifically on the privacy team. In turn, this frees up their time so that they can focus on spotting inappropriate access when it occurs.
