

SecureRamp™

Master Remote Access

Healthcare today is highly interconnected. To run an effective organization, you must open your systems to hundreds of vendor partners, affiliated providers, and employees. This could make your network vulnerable to malware, viruses, and unapproved access. Effective management through manual means is challenging.

That's why iatricSystems™ developed SecureRamp™. Using highly advanced security measures, SecureRamp simplifies remote connectivity, ensuring secure access to your systems and PHI while easing the burden on you and your staff.

SecureRamp helps improve your key processes

- **Business Associate Agreements (BAAs)**
Deny access for terminated or out of date BAAs
- **Third-Party Access**
Keep it secure — no matter their remote location
- **Monitoring Network Connections**
SecureRamp does it in real time
- **First Line Support**
iatricSystems troubleshoots remote access issues

HIPAA third-party access rules are tough. SecureRamp can help.

Managing business associates and third-party access has never been easy for any healthcare organization. Failure to properly manage third-party remote access could result in regulatory non-compliance and fines.

SecureRamp decreases that risk with a simplified remote connectivity workflow.

SecureRamp allows you to:

Manage Remote Access

SecureRamp ensures that designated third-party access is through one secure portal, not multiple VPNs, reducing the opportunity for unauthorized access.

Improve Security

With its advanced security measures, SecureRamp blocks unsafe access to your network while providing a deeper level of security and monitoring for your organization.

Reduce IT Staffing Costs

Managing remote access is costly, time-consuming, and often prone to error. Shift the management and support of remote third-party connectivity to iatricSystems with SecureRamp.

Simplify Audits and Reporting

SecureRamp offers the dashboards and reports you need to demonstrate security effectiveness to health system leadership and auditors.

Key Product Capabilities:

Here's how SecureRamp can help you stay in compliance — and make your job easier:

- **Valid BAA Required for Network Access**
Deny access for partners with terminated or out of date BAAs, and receive notification for BAAs requiring review.
- **Multi-Factor Authentication**
Prevent unauthorized access by demanding two or more pieces of evidence for authentication.
- **Extend Your Security Policy Beyond Your Walls to Remote Endpoints**
Reduce the possibility of malware or ransomware attacks by doing automated checks of the remote system, including checking for:
 - Up-to-date Anti-Virus software
 - Automated software updates
 - Activated firewall
 - Encryption
- **Set Access Schedules by Vendor**
Easily customize network access by Holidays, Days of the Week, and Time of Day.
